REPORT

Service: Radiologist	**Date of Receipt:** Oct 09 2025

REQUEST DETAILS - 01:27 PM OCT, 09 2025

Hospital Name: New Sky Vet Hospital	**DVM Name:** Harvey Wilson

PATIENT DETAILS

Owner Name: Dean Ford	**Age:** 13 years, 0 months
Patient Name: Marshal	**Patient Id:**
Species: Canine	**Breed:** Belgian Malinois
Gender: F	**Neutered:** ALTERED

CASE HISTORY

Mild lethargy and reduced appetite over several days. No vomiting or diarrhea reported. Physical examination largely unremarkable. Abdominal ultrasound requested to screen for a potential underlying cause. Clinical Signs and Symptoms: None reported

RESPONSE - 01:39 PM OCT, 09 2025

Abdominal Ultrasound- The study includes 14 still images and 0 cine loops.

Findings:

Liver- Normal
Gallbladder- Normal
Spleen- Normal
Kidneys- Normal
Adrenal glands- Not included in the provided images.
Urinary bladder- Displays mild diffuse wall thickening though is minimally distended.
Gastrointestinal tract- Minimal gastrointestinal tract is included in the provided loops but no abnormalities are noted.
Pancreas- Not included in the provided images.
Regional Lymph nodes- Not included in the provided images.
Other- There is no evidence of peritoneal effusion.

Conclusions:

1. The study is largely normal without a source of clinical signs evident. The mild urinary bladder thickening is most likely pseudothickening related to the minimal distension, though cystitis is not excluded. CBC/Chemistry and urinalysis may provide additional information.

Eric van Eerde
DVM, DACVR
